

## FRENCH OAK FLOORING

Sustainably harvested old-growth French Oak, with its warm medium-brown hue and resiliency, is ideally suited for flooring. This hardwood has low porosity, high density, and high tannin content. While not reclaimed, the French have managed their forests such that each felled tree is replaced with a seedling. Our oak is PEFC certified (the worldwide equivalent to FSC certified) to help maintain healthy, old growth forests for generations to come.

Our flooring has been kiln dried. During the milling process, we add back relief for stability and square-edge-tongue-and-groove joinery for straightforward installation. See images for our surface texture options.

### FLOORING SPECS

board thickness	3/4" solid
board widths	6-12", 8" standard
board lengths	3-8' standard; longer lengths available upon request
